Grant Thomas Sacco

Austin, TX 78702 | (224) 456-5449 | gsacco15@gmail.com | LinkedIn

SUMMARY

Manufacturing-focused engineer with 8+ years of experience designing, building, and scaling production systems in industrial environments. Proven ability to develop manufacturing processes, integrate equipment and automation, and support production ramp from concept through full-rate operations. Strong hands-on experience with factory buildouts, assembly workflows, process documentation, and continuous improvement to drive throughput, quality, and cost performance. Brings an entrepreneurial mindset from building a startup, with a bias for action and the ability to thrive in fast-paced, solution-oriented environments.

EDUCATION

University of Kansas, Lawrence, KS 2014 – 2018
Bachelor of Science, Mechanical Engineering (BSME)

PROFESSIONAL EXPERIENCE

Enovis Corp, Austin, TX | Sr. Project Engineer – Advanced Manufacturing Engineering 2025 – Present

- Directed the end-to-end design and construction of a 200K square foot operations facility with a budget exceeding 10M that combined office, automated distribution, clean pack, sterilization, and additive manufacturing spaces while serving as the owner rep for all construction activities.
- Led a cross functional engineering group and coordinated with general contractors, architects, and specialty vendors to deliver all design build phases from conceptual planning through commissioning and turnover.
- Established scope, schedule, and budget baselines for major construction and infrastructure projects while ensuring full alignment with leadership objectives, regulatory requirements, and the company's multiyear operational roadmap.
- Managed construction, infrastructure, and operational readiness projects including major utility installations, equipment integration, controls, and life safety systems to ensure the site reached full production capability.
- Oversaw build out of a state-of-the-art industrial additive manufacturing center with EBM and SLS systems including all required utilities, equipment siting, installation sequencing, material flow layouts, and production validation.
- Developed scalable workflows for patient specific implant production and aligned all processes with regulatory, quality, and environmental standards.
- Directed long range infrastructure planning for the next phase expansion including capacity studies for electrical, mechanical, and process utilities along with equipment road maps, site layout strategy, and automation planning.
- Increased facility throughput and reduced operating constraints by applying lean principles and driving continuous improvement across manufacturing and facility operations.
- Drove projects through construction, commissioning, validation, and formal handoff to operations, ensuring safety, quality, and long term equipment reliability.

OnlyChargeEV, Dallas, TX | Founder 2022 – 2024

- Founded and scaled a commercial EV charging service company, expanding rapidly within the competitive market landscape across major Texas hubs: Austin, Houston, San Antonio, and Dallas.
- Engineered growth through strategic marketing initiatives, including CRM automation, targeted email campaigns, and direct sales and partnerships, significantly expanding OEM and service partner networks such as ChargePoint, Ford Pro, Xeal Energy, and Verdek.
- Directed the end-to-end consultation, design, and implementation of tailored EV charging solutions, enhancing client engagement across commercial, fleet, and multifamily sectors.
- Developed and optimized business operations by automating internal systems, including payment processing, accounting, compliance, legal, branding, and estimation and proposal generation, improving business efficiency and financial management.

MAPEI Corp, Dallas, TX | Project Engineering Manager 2021 – 2024

- Managed industrial construction and manufacturing capital projects totaling over $30M, including mechanical, electrical, process piping, and equipment installation scopes.
- Directed design, construction, commissioning, and lifecycle management of a strategic $5M liquid admixtures plant expansion, introducing automated blending and bulk transfer systems to the Southern U.S.
- Led all phases of project execution, from negotiation and procurement to installation, start-up, and commissioning. Ensured projects adhered to timelines, budgets, and quality standards, culminating in successful close-outs.
- Directed collaborations with multinational vendors and contractors, managing both on-site execution and the procurement of advanced manufacturing equipment.
- Developed a 315K sq. ft. brownfield site into a state-of-the-art production and distribution facility, overseeing all developmental phases from speculative planning to achieving full operational status.

MAPEI SpA, Milan, Italy | Project Engineer 2019 – 2021

- Extensively trained in multi-dispensary functions within day-to-day manufacturing life cycles in operations and production.
- Managed capital projects regarding process improvement, manufacturing, and construction.
- Supported in the design, prototyping, and testing of new static mixing technology for Mapei admixture production.

MAPEI Corp, Chicago, IL | Junior Project Engineer 2018 – 2019

- Supported technical studies and capital projects for the Mapei Chicago Site.
- Managed medium-scale capital projects focused on process improvement and infrastructure upgrades.

Formula SAE, University of Kansas | Electric Powertrain Design Engineer 2017 – 2018

Grant Thomas Sacco

Austin, TX 78702 | (224) 456-5449 | gsacco15@gmail.com | LinkedIn

- Led team of 5 electrical engineers to design, manufacture, and build in house motor controller.
- Designed, tested, and built electrical storage and management system for Formula Electric racecar.
- Coordinated with other sub-systems to integrate powertrain into the overall function of the vehicle.

Biomechanical Research, University of Kansas | Lead Design and Manufacturing 2016 – 2017

- Designed, tested, and built multiple assistive devices to enable a paraplegic to operate piano pedals.
- Manufactured two fully functional prototypes using additive manufacturing techniques.
- Produced a final product using subtractive manufacturing techniques, meeting design targets and specifications.

AWC Industries, Chicago, IL | Mechanical Engineering Internship Summer 2016

- Designed various components, assemblies, and detail drawings per spec. utilizing SolidWorks.
- Reduced raw material waste by designing parts specifically for manufacturing.
- Prevented excessive downtime by designing and fabricating replacement components for broken equipment.

ACTIVITIES & LEADERSHIP

- HOA Board Director, Mercer Square Condominium Association
- Society of Automotive Engineers & Society of Biomedical Engineering, University of Kansas
- Participant of Formula Electric Competition, SAE Lincoln NE

MANAGEMENT, TECHNICAL SKILLS & LANGUAGES

- **Management**: Project Management, Business Development, Budget Planning, Industrial Construction, Procurement, Strategic Planning, Site Integration, Risk and Issue Tracking, Expansion Planning, Equipment Installation and Integration, Construction Project Management
- **Technical**: Mechanical & Electrical Systems Design, EV Infrastructure Development, P&ID's, Process Automation, Permit & Compliance
- **Software**: AutoCAD, SolidWorks, MATLAB, LabVIEW, Microsoft Project, CRM/ERP Systems
- **Languages**: English (Native), Italian (Professional Working Proficiency)
